Mines and Prospects--Furnaces and Mills

September Record At Con. Mercur

Both Mills in Operation, With the Month's Earnings Showing a Pronounced Increase.

The September record at the mill and mines of the Consolidated Mercur was reminiscent of palmier days. During that period the precious metal was leached Press arout 21,000 tons of gold-bearing which maintained a most satisfactory average, while the net earnings no doubt will show a pronounced increase over the previous month. At the Manning mill, from which gold of the value of so many millions issued prior to the consolidation with the Golden Gate, there was leached during the same period 400 tons of gold-bearing tailings daily, and while the net margin is confined to cents, the total proceeds are by no means to be despised. Operations will continue at this plant until cold weather makes it necessary to suspend for the winter. Last year they were continued until about November 20. With conditions under ground Manager Dern is quite well pleased. Old ore channels have been tapped on lower horizons, the metallic average is quite satisfactory and the volume is quite large. Meanwhile the payroll has been materially reduced, and the cost of operation at this time is less than at any period in the career of the producer. The slimes plant, which was introduced at an expense of about \$90,99 to the company, has been indefinitely hung up, said Manager Dern, and with the old method he is holding the tailings down to an average that holds out little to the future.

In the same locality there is some activity around the old Geyser-Marion, while at the Sacramento the usual volume of gold dust is being produced, in addition to the flow of mercury from its retorts. It is the impression at camp that the management of the Herschel is serious in advocating the construction of a mill with which to reduce its ores. tory average, while the net earnings no doubt will show a pronounced increase

GOLDFIELD SHIPMENTS.

Much Wealth From It Continues to Pour Into the Sampler.

ore from the Goldfield camp was received here yesterday. This shipment comprises 1200 sacks of general mine run ore from the Bowes-Kernick lease on the Jumbo property, and will average \$150 per ton, says the Reno Gazette. The continued heavy shipments which are daily being received from the Tonopah-Gold-field districts are but a small part of the ore already mined, and as soon as adequate railroad facilities to handle the enormous production are added, the daily receipts at the sampling works here and the new sampler now in course of erection at Mount House will be increased to fifteen or twenty cars daily.

The closs of ore now coming in is all of high grade, running from \$200 to \$1500 per ton, while frequent receipts of selected ore often run from \$200 to \$20,000 per ton. These receipts, however, are necessarily small, running from 500 pounds to a ton. here yesterday. This shipment com-

per ton. These receipts, however, are necessarily small, running from 500 pounds

OVER HALF MILLION.

Week in the Ore and Bullion Market Closes on Big Exhibit.

closed on settlements amounting to \$526,-627, compared with \$429,600 for the pre-637, compared with \$42,600 for the pre-vious one, and, divested of external units such as recently cume from Nevada and in which the consignors received over \$100,000 for less than 100 tons of ore, it becomes a record. To help out the im-posing exhibit were settlements on gold builton, with Con. Merour as the more prominent contributor, the figures, other-wise, coming from normal sources. The prominent contributor, the figures, otherwise, coming from normal sources. The day's settlements in the open market amounted to \$70,000, McCornick & Co. reporting them as they follow: American buildon, \$25,000; gold, silver, lead and copper ores, \$23,700.

In the metal market silver ruled at \$77% cents an cunce, lead at \$7.5064, 20 per 100 pounds, and casting copper at 12 cents a pound.

BROUGHT GOOD ORE.

Rock From United Bingham Affords a Handsome Margin.

The management of the United Bingham reported at the smelter during the day with two more carloads of ore, which day with two more carloads of ore, which was settled for on controls showing 28 per cent lead, 28 ounces silver, 56 gold and 2 per cent copper per ton. Of this class of ore, said Manager Joseth, there is considerable exposed, and eight more miners will be put to stoping by him on his arrival at Bingham this morning. With the outlook for United Bingham, neighbor of the United States, the management is more favorably impressed than at any period since its development was begin, and a steady increase in the tonnage from that source is now assured.

PUMP AT GEMINI.

Will Handle the Waters on Lower Levels of the Bonanza.

A new pump was installed on the 1990foot level of the Gemini mine this week, taking the place of a somewhat smaller one, which was hardly large enough to one, which was hardly large enough to take care of the flow of water. The new pump is capable of handling 250 gallons a minute and will be able to handle the flow of water for a long time to come. The capacity of the old pump was 125 gallons a minute, says the Reporter of Eureka.

A pipe line is now being put in for the purpose of connecting the La Reine mine with a well, just east of the Summit, which Jesse Knight recently purchased. An automatic pump has been installed at the well.

Copper Belt Extensions.

To decide on just what extensions it is justified in undertaking at Bingham, the engineer for the Copper Belt railway will re-enter that field the present week, his observations to be prosecuted as diligently as conditions shall permit, that grading may be out of the way of the heavy snowfall. Discussing the proposed extensions yesterday, Manager Bayly said it was quite conclusive that connection will be made with the Highland Boy mines of the Utah Con., as the upfreight there is very heavy, without reference to patronage from other sources along that division.

Northern Light Mill.

J. M. Swem, to whom the Northern Light mill on Lion hill was recently sold, reports its parts going in many directions. Some of them have been purchased for use at the Buckhorn and Ophir Hill mines in Ophir canyon, ophir Hill mines in Ophir canyon, some have found moorings at the Overland of Sunshine, while the structural iron is being made to serve some of the needs at the United States company's plants. It will have entirely disappeared in the next ninety days, said he yesterday.

WEEK ON 'CHANGE.

SEATTLE-Hotel Northern, WASHINGTON-Willard, Raleigh

Preference Generally Is Shown for the Lower-Priced List.

the Lower-Priced List.

The week on the mining exchange closed on the sale of 182,485 shares of stock for 24,415,12, the day on the sale of 16,640 shares, for which E99,87 was paid. May Day was again the more active among the traders, and with heavy buying orders was dealt in freely up to 144c, from which point it receded gradually to 125c, and railying, closed on a transfer at 135c. Daly recorded the transfer of a single lot at 23,95, while Daly West was marked down to \$2,95, with Grand Central an offering at \$1.15, although it is reasonably well assured that the company will provide the means with which to fill the Christmas stocking if it does not invite the flock up to a modest repast before. Horn Silver did not reflect the improved condition of its mines, nor did Mammoth, by which the October dividend will be posted in a few days, while the best to be had for Victoria at the finish was 55 cents, with Eagle & Blue Bell held firmly at 80. Con. Mercur was in steady demand, although the traders were some distance apart, while the best to be had for Century, which continues to pound gold doilars out of its Park valley ores, was 273c, with Sacramento, another of the gold-bearing list, offered at 13c. Ontario, with its new mill turning out a first-class concentrate, was entitled to something better than was held out to it, as was Bullion-Beck. The physical condition of which is better than at any period in several years. Carlsa recorded some gains during the week and closed with 1950 demanded for it, while Utan of Deep Creek was an offering at 50c. the day and week closing on the following market:

One More Strike in Old Honerine

Solid Breast of Galena Shot Into on Another Level in Stockton's Big Proposition.

To the extraordinary array of ore bodies that have characterized the development of the Honerine of Stockton has just been added another. With this acquisition, said Superintendent Raddatz, who came in from camp to confer with Manager Snyder on the eve of the latter's departure for the East, the number, incredible as it appears, is increased to thirty-two. The latest, said Mr. Raddatz, who had just been advised by telephone that in the face of the drift was exposed a solid breast of galena, was unearthed on the 500-foot level, east of the old shaft. In extend-ing this level a cave was shot into at a station about 150 feet east of the shaft. Continuing along the course of the fissure a second cavern was opened up, its walls incrusted with a carbonate flecked with galena. In length, the second chamber was about thirty-five feet. Into the east wall of this two shots were put off, explained Superintendent Raddatz, and the carbonates gave way to a solid mass of galena in appearance identical with that now coming to market. What the extent of this ore body, development only can determine, although the advices by tel-

ephone all indicate strength. ephone all indicate strength.

At the concentrator a new record was made on Thursday, when during two shifts 192,000 pounds of concentrates were produced from 210 tons of ore, the product showing an average of 34 per cent lead, sixteen ounces silver and 60 cents gold, with an excess of 16 per cent fron. Of this product thirty-six carloads were forwarded to the smelter in September. In addition to this, six carloads of crude ore, the latter maintaining an average of 60 per cent lead, with eighteen ounces silver, some gold, and an iron excess. Meanwhile the long drain tunnel is progressing and, against a flow of 9000 gallons of water per minute has advanced 100 feet since September 18, when driving was resumed. It is now at the 7325-foot station, and will continue as rapidly as conditions shall permit. Over the new disclosure on the 900-foot level Mr. Raddatz, as are the officials, is not a little en-

UNCLE SAM'S LATEST.

New Ore Body One of Most Important Made Recently.

Though the matter has not been explotted at all, there has been develop-ments in the Uncle Sam company mines during the past month or so that are entitled to mention. Some time last month a new ore-bearing channel was tapped in northern terrichannel was tapped in northern territory on the intermediate or 400-foot level below the collar of the shaft. When first struck the ore carried fischief values in gold, some of the rock running over three ounces in that metal, and all of it a good shipping grade, says the Miner of Tintle.

It was driven through for some distance, and, as headway was made, the gold values diminished somewhat and the lead-sliver contents increased. Several cars of ore came from this new chute when appearances seemed to in-

chute when appearances seemed to in-dicate that its limits in a northerly di-

rection had been reached.
C. C. Griggs, the superintendent of the mine, insisted on driving ahead, and now he reports from the camp to the management that after breaking through eight feet of lime in which there was little to indicate early re-suits, he is again in the ore and the body looks big and strong. The ore is breaking a lead carbonate, carrying good values in silver and some gold. The chute is located in a portion of the mine quite remote from any of the old workings, and the possibilities of the discovery are all the greater on that account.

SAW APEX'S WEALTH.

English Visitors Look Into the Resources of Bingham Property.

The Bulletin, in its digest of the week

at Bincham, says: Manager Orem of the Utah-Apex, Manager orem of the Cush-Apex, accompanied by a party of seven English
capitalists interested in that property, and
some of them understood to be Highland
Boy and Boston Con. stockholders, visited the mine Tuesday and took the
party through its workings. They were
evidently greatly pleased with the general showing made.
Results of developments at Red Wing
Extension continue of a most stratifying

Results of developments at Red Wing Extension continue of a most gralifying nature. A great tonnage of good milling ore is on exhibition, and only sinking to water level is needed to insure the speedy installation of a concentrator at the mine.

Early in the week work was begun on the Utah-Apex deen tunnel, which, starting from Carr fork, is to be driven 300 feet, at 3000 feet entering the company's ground at great depth.

The sluicers working on creek tailings below the depot have made about tentons of good-looking concentrates.

From Utah-Apex teams are delivering about three carloads of ore a week, that being the present limit, owing to the demands on haulers.

mands on haulers

Hingham & New Haven ore is being shipped at the rate of fifty tons daily.

Manager A. L. Jacobs, in camp Monday, reported operations at the Butler-Liberal progressing favorably.

PLAYED TO QUALIFY.

Good Golf Was Seen at the Country Club Yesterday Afternoon.

The first of the qualifying rounds for the annual championship golf tournament were played yesterday afternoon at the Country club, when five men played the cighteen holes. The football game and other attractions kept many away from the course, and those who entered will be allowed to play the qualifying rounds at the club today.

A. W. Copp. J. Walcott Thompson, Frank E. McGurrin, George Holman and E. B. Wicks played yesterday, and some exceptionally good golf was witnessed by those who followed their game.

Match play will begin next Saturday and will continue during the month. All preliminary rounds will be for twenty-seven holes and the finals for thirty-six holes. The sixteen lowest pores will qualify for entry in the championship contest. A championship cup and a consolation cup will go as prizes, while six steins will go to the runner up.

The course has recently been lengthened 270 yards and is in splendid shape, and the players have all improved their form. The greens committee has been busy and the result is the best course of the year. The first of the qualifying rounds for

PRODUCTION OF COPPER.

New Record Piled Up at the Valley Furnaces the Past Week.

By the copper producer the statistician was presented with a new record during the week, the output of the valduring the week, the output of the val-ley furnaces revealing a total of 916,115 pounds. To the record as a whole the Utah Con. and Bingham each made contributions that exceed all previous ones, the output of the former reaching ones, the output of the former reaching a total of 371.097 pounds of copper bullion, containing gold and silver; the output of the latter, 304.628 pounds of buillion of the same class, the record closing as follows:

 Bingham Con.
 304,628

 United States
 240,330

 Utah Con.
 371,697

On this basis the copper production of the State at this time is exceeding 50,-000,000 pounds per annum, while a prominent producer discussing the output of 1905 expresses the belief that it will reach at least 70,000,000 pounds. In support of his forecast, attention is called to the increased production at the Yampa smelter, Bingham canyon. the capacity of which will have been doubled in the next ninety days, the presence of the Newhouse mines out of Frisco in the field, the equipment of the Boston Con. of Bingham in manner shall enable it to assert its resources, and the output of the red metals from many other sources now being devel-oped. Indeed, it is not unlikely that his estimate will be exceeded.

LITIGATION DID IT.

Oregon King Closed Down Pending Fight With Claimant.

The Oregon King group of mines in Crook county, Ore., is again closed down by litigation. The demand is for a four-sevenths interest in the property and \$100,000 damages on account of production. The allegations are that John Knight and two other men were grub-staked at the time they went into Crook county prospecting, and the share of the results was to be on the basis of one-seventh to each of the three prospectors and one-seventh to each of the four men providing the grub-stake. Knight later bought his prospecting partner's interest and sold to the gentlemen who organized the Oregon King Mining company. The Oregon King Mining company. The founders of the company include P. J. Quealey, to whom Wyoming and the West is indebted for the big coal mines at Kemmerer, Jack Edwards, the well-known stockman, and C. M. Cartwright, all well known in Salt Lake City.

AT OLD ONTARIO.

Steady Stream of Concentrates Now Coming From New Mill.

At the Ontarlo mill the output of concentrates is now averaging about fifty tons daily, and, with the lower level upor which to draw, this will be materially increased. It was said yesterday that orders to continue driving the tunnel, with the territory of the Daly West as its destination, probably will be posted next week, while drifting from the Liberal tunnel to a connection with the Daly's Mazeppa ledge will begin in the next few days. With all this going on, conditions in that portion of the great camp of bonanzas will have been materially enlivened.

Tonopah-Goldfield Stocks.

Thursday's transfers on the San Francisco board were recorded as they follow: MacNamara, 8900 at 375/38c; Montana-Tonopah, 600 at 11.90/8187½; Rescue, 1160 at 11c, seller ten days; Belmont, 22500 at 575/859c; Gold Mountain, 590 at 15c; North Star, 7000 at 196/29c; Diamondfield, 600 at 40c; 1500 at 40c, seller thirty days; Tonopah Extension, 1000 at \$1.70, seller fifteen days; 500 at \$1.65.

Mining Notes.

Director E. E. Abercromble of the Bos-ton Con. has returned to his Boston home satisfied of the future of the com-pany's Bingham mines that ore now turn-ing \$1000 daily into the treasury. Samuel M. Levy has gone to the Buck-norn mines in Ophir canyon.

Capt. C. H. Lawrence, manager of the Sevier Con. of Gold Mountain, is up from camp again much pleased with conditions

Morris M Johnson has gone to New-house to inquire into the progress of de-velopment on the bonanzas of that camp and the long tunnel. Clarence E. Allen, superintendent of the Centennial Eureka, has returned from that Tintle property.

that Tintle property.

At a meeting of newly-elected directors of the American Smelting and Refining company held recently, the board organized by the re-election of all retiring officers and by the election of Silas W. Eccles of Salt Lake City as vice-president, in charge of the traffic department. This office is newly created. Mr. Eccles has been the traffic manager of the company the past two or three years.

Messrs, J. C. Thompson and Edward L. Sheets have gone to Goldfield, where they will locate and engage in a brokerage business.

Willard F. Snyder, president of the Western Exploration company, leaves for Chicago and the far East today to meet with Eastern interests in the big com-pany, whose holdings are among the most extensive in the West.

The compressor at the Lower Mammoth is to be moved to a position without the mine. A half dozen leases are now being exploited under ground, with some mineral showing on the 1300-foot level.

Harry Irwin of the Boston Con, came up from the Bingham Con. smelter, to whose furnaces the output is delivered under his direction, yesterday. Robert Glendinning of the Allis-Chal-

mers Machinery company leaves for Miswaukee tomorrow, where, with other saleemen, he will be the guest of the company for several days. H. V. Croll, formerly of this agency and now of San Francisco, is scheduled to pass through tomorrow on his way East.

The return of Fred Bemis, the well-known mill superintendent, is scheduled for the present week, after which operations at the Dewey mill will probably

Manager P. W. Madsen, under whose direction the Century mine at Park val-ley has given such good account of it-self, has gone to camp again. Robert W. Brady of the Ploche-Nevada Con., leaves for its mines in Ne-vada tomorrow to measure up the new ore bodies.

Superintendent Galliger of the Stockton mine, who was in lown during the day, reports construction on the new mill pro-gressing satisfactorily.

Superintendent W. H. Nutting of the Bingham Con. smelter was a visitor at the general offices of the company dur-ing the day, and was freely congratu-lated on the record with which he closed the week.

H. F. Quint, formerly with the Park City Metala company, has accepted the local agency of the Dr. Campbell ore separator.

Million Dollars in Ten Months

Stirring Lesson on the Resources of the Diggings by Silver King of Park City.

With the payment of the Silver King's

egular dividend, which was posted yesterday for distribution October 10, its shareholders since January 1 last will have drawn down \$1,000,000, while the total since the crystallization of the splendid undertaking was begun by Senator Kearns and those who subsequently rallied about him will have been swelled to \$8,325,000. Less than \$6,000,000 added to this, and the divi-dend record of the Ontario, of the same marvellous camp, which has remained marvellous camp, which has remained unchanged for so long a period, will have been exceeded. That this will be achieved is as positively assured, perhaps, as it is that the President of the Nation will be permitted to draw his salary for the year, no matter what the result of November's conflict. It is said of the Bonanza, whose domain comprehends a veritable empire, indeed, that exposed at this time are deed, that exposed at this time are resources that shall enable it to repeat its present disbursements when the oungest of those who are permitted to participate in them shall have grown gray, and yet the dividends are earned and the splendid surplus maintained ithout apparent effort.
While it has not yet attained a place

among those from which the "needful" is each month derived, the Kearna-Keith, propagated by the same masters Keith, propagated by the same masters of the industry, is speeding rapidly in that direction, and it is not unlikely that Christmas stockings will revel in the wealth of that proposition. From its mill is coming a steady volume of concentrates, without reference to its first-class ores, and gradually it is acquiring the place to which its founders have looked forward as the campaign of development progressed. of development progressed.

of development progressed.

The directors of the Daly West, of the same peerless camp, will meet on Wednesday, when its dividend of 40 cents a share or \$72,000 will be posted.

PEOBATE AND GUARDIANS GOLD IN DEATH VALLEY. Consult County Clerk - residences for surther information,

But It Is Worth a Million Dollars a Week to Stay There.

Special to The Tribune. CALIENTE, Nev., Oct. 1.—Dave Wilson, who has been prospecting in Death valley for the past four months, reached Caliente yesterday, looking decidedly the worse for wear. He has traversed an immense area of desert country, was once clear off the trail and lost for three days, but by what he calls "dead luck" struck the trail and water before himself and his borse played out, by stumbling onto the camp of a man named Murdock, who has recently been brought here suffering from partial loss of sight in his search for gold in that desert land.

Wilson says that it is worth a million dollars to spend a week in Death valley, but that there is beyond doubt an immense number of fabulously rich ledges still to be located in the barren wastes. He located fourteen claims, through which he traced a ledge three feet wide at grass roots, the ore being snow white, brittle and honeycombed and specked throughout on the surface with coarse and wire gold.

Samples shown to several business men CALIENTE, Nov., Oct. 1.-Dave Wilson,

Samples shown to several business men here were the richest ever brought into camp and will run into thousands of dollars per ton. He had a buckskin money-bag nearly full of coarse gold pounded from ore taken from surface croppings, and said he could have located a dozen claims on the ledge, but was so nearly out of water when he discovered them that he dared not spend the time necessary in going over and locating them properly.

Wilson went to Sait Lake this afternoon

Wilson went to Salt Lake this afternoon and will go from there to Cheyenne, Wyo., where his brother, a wealthy cattleman, resides, and who will aid him in opening up his claims. The group is called the Devil's Saw group, from its frightfully jegged appearance on the creat of a mountain where the cilitering croppings stand white and sharply defined as a mammoth saw. They are seventy miles from water and 120 miles from the railroad.

Charles Wheeler, who took samples of his ore to Salt Lake from Los Vegas, returned today with results of 32 per cent copper and \$5.49 gold from a three-foot vein. wilson went to Salt Lake this afternoon

Jim Nelson, one of the owners of the Ajax claim south of Mospa river, returned from Salt Lake today with asays of \$112.40 per ton in tellurium and free gold, on the three and one-half-foot vein.

CHILDREN ARE CALLED STUPID

And dull by teachers and parents, oftimes for no other reason than that their eyes are not as the eyes of other children. Parents take a grave responsibility upon themselves when they neglect the signs of defective eyesight. We make no charge for examination and never recommend glasses where they are not needed.
